

PRACTICAL – 1

Initiate the semester-long StudentHub portal by identifying the problem scope, user roles, key modules, navigation flow, and minimum 10 pages. Create a sitemap, low-fidelity wireframe, project folder structure, README file, and GitHub repository.

Problem Statement:

This practical talks about bulding a StudentHub portal where students can solve their questions. Many colleges lack a centralized website where students can Login , View events, Access profile, Submit Assignments, receive any important notification regarding to the academics etc.

User Role:

As the main user here is Student the portal contains ,

- Login
- Attendance check
- View Fee Structure
- View Events
- Edit Profile
- View Result
- Contact College

Functional Requirements:

For Student

- Register
- Login
- Logout
- Edit Profile
- View Dashboard
- View Events
- View Result
- Contact Admin

SiteMap & Navigation Flow:

Wireframe:

Login page:

The wireframe shows the layout of the login page. At the top is a placeholder for a logo (a square with an 'X'). Below it is the title 'STUDENT PORTAL'. The form includes an 'EMAIL ADDRESS' input field, a 'PASSWORD' input field, a 'FORGOT PASSWORD?' link, a 'REGISTER' button, and a 'LOGIN' button.

Key Questions:

1. What is URL and what are the parts of a URL?

Ans: A URL (Uniform Resource Locator) is the address used to locate a resource on the Internet.

The main parts of a URL are:

- **Protocol:** https://
- **Domain name:** www.example.com
- **Path:** /student/
- **File/Page:** dashboard.html

2. How is an HTML file processed in a web browser?

Ans: When an HTML file is opened in a browser:

1. The browser receives or loads the HTML file.
2. It reads and parses the HTML code.
3. HTML elements are converted into a DOM (Document Object Model).
4. The browser loads linked CSS, JavaScript, images, and other resources.
5. CSS is applied to determine the appearance of the page.
6. JavaScript is executed if present.
7. The browser renders the final webpage on the screen.

3. How will page navigation flow be managed among all HTML pages?

Ans : Navigation between StudentHub pages will be managed using HTML hyperlinks (<a> tags).

4. How will GitHub commits be maintained after each practical?

Ans : Git and GitHub will be used to maintain the project's version history.

After completing each practical, changes will be saved using a meaningful commit message.
